

The University of Texas at Tyler
Master of Science in Computer Science

Course Syllabus

Course Number:	COSC 5379																								
Course Title:	Advances in Remote Sensing and GIS Analysis																								
Course Description:	This course will bring together recent developments in remote sensing and GIS analysis with a particular emphasis on software development techniques. Topics will include GIS data models, software algorithms for data storage, and analysis.																								
Pre-requisites:	COSC 2315, COSC 2336																								
Credits:	3 hours																								
Text(s):	Demers Michal, N. (2009). <i>Fundamentals of Geographic Information Systems</i> . John Wiley, Danvers, MA. Additional Text: LANDGREBE, David A. (2003). <i>Signal theory methods in Multispectral Remote Sensing</i> . John Wiley, Danvers, MA.																								
Languages Used: (if applicable)																									
Topics:	<table border="1"> <thead> <tr> <th>No</th> <th>Topic</th> <th>Hours</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Introduction to digital geography</td> <td>3</td> </tr> <tr> <td>2</td> <td>Digital geographic data and maps</td> <td>3</td> </tr> <tr> <td>3</td> <td>GIS data models</td> <td>6</td> </tr> <tr> <td>4</td> <td>GIS data input</td> <td>6</td> </tr> <tr> <td>5</td> <td>Remote sensing and multispectral data</td> <td>6</td> </tr> <tr> <td>6</td> <td>Multispectral data analysis</td> <td>12</td> </tr> <tr> <td>7</td> <td>GIS and remote sensing applications</td> <td>6</td> </tr> </tbody> </table>	No	Topic	Hours	1	Introduction to digital geography	3	2	Digital geographic data and maps	3	3	GIS data models	6	4	GIS data input	6	5	Remote sensing and multispectral data	6	6	Multispectral data analysis	12	7	GIS and remote sensing applications	6
No	Topic	Hours																							
1	Introduction to digital geography	3																							
2	Digital geographic data and maps	3																							
3	GIS data models	6																							
4	GIS data input	6																							
5	Remote sensing and multispectral data	6																							
6	Multispectral data analysis	12																							
7	GIS and remote sensing applications	6																							
Additional Materials:																									

Evaluation Method: (only items in dark print apply)	
1. Examination/Quiz	2. Homework
3. Paper/Report	4. Computer Program
5. Project	6. Presentation
7. Class Participation	8. Peer Review
9.	10.

Course Objectives¹: By the end of this course students are expected to:
1. Describe some basic analytical capabilities of a modern GIS and remote sensing techniques [1,2]
2. Know the four primary functions of GIS data input [1,2,5]
3. Understand the relationship between input scale and projection on GIS error [1,2,7]
4. Explain the process and the purpose for measuring polygons to determine long and short axes, perimeters, and areas [1, 2, 7].
5. Be familiar with some of the common thematic map classification systems available, especially for land cover and land use maps [1, 2, 5, 7].
6. Be familiar with various clustering techniques used in multispectral data analysis [1,2,5,7]
7. Understand how to integrate satellite data with maps [1,2,7]
8. Understand and describe the different methods of interpolation, their uses and their advantages and disadvantages [1,2,7].
9. Explain the close relationship between analytical GIS design and GIS database design [1,2,7].
¹ Numbers in bracket refer to method(s) used to evaluate the course objective.

Relationship to Program Outcomes: (only items in dark print apply)²
This course supports the following computer science graduate program outcomes, which state that our students at the time of graduation are expected to:
1. possess an enhanced breadth of knowledge in computer science, combined with a depth of knowledge in critical core areas of computing [1, 2, 3, 9];
2. possess the skills and knowledge for lifelong learning in computer science;
3. possess knowledge of the theoretical foundations of computing and have strong practical application experience [4, 5, 6, 7, 8];
4. possess and demonstrate oral and written communication skills;
5. understand and respect the professional standards of ethics expected of a computer scientist and be knowledgeable concerning the history of computing field;
6. possess a knowledge of computer security and computer security management;
7. analyze and compare relative merits of alternative software design, algorithmic approaches, and computer system organization, with respect to a variety of criteria relevant to the task (e. g. efficiency, scalability, security) [4, 5, 6, 7, 8]; and
8. implement algorithms in multiple programming languages, on multiple hardware platforms, and multiple operating system environments.
² Numbers in brackets refer to course objective(s) that address the Program Outcome.
